

RF 10/10 TRADE CRITERIA

Use Royal Flush chart:

1. **GATEKEEPER** – The Gatekeeper chart is not a trade set-up by itself but shows if there is an environment conducive to a good trade. The Gatekeeper is embedded in every RF chart (above) but it's quicker to use the Gatekeeper screen, which shows 9 pairs (located in the subscriber area).

The Gatekeeper must have all the same color / direction:

- Diamond
- Blackjack
- MA
- HMI
- Candles above/below the MA

If so, now we look for a trade.

2. **TRIGGER** – The Trigger chart must show price moving away and out of the desert (the area between the two heavy MAs). If price is inside the desert, we don't know if there are more buyers or sellers so don't trade (that is a 6 Aces trade).

If #1 Gatekeeper criteria are met, the following must be the same color / direction to enter the trade:

- A recent arrow
- Painted candle that PRINTS*

3. **HSI** – Click a top or bottom on the chart, choose 'buy' or 'sell' to calculate targets. Check which targets have already been hit.
4. **TARGET** – 25 pip target w/ 30 pip stop. Move stop 1 pip into profit when +15 pips. Monitor the trade momentum using smaller timeframes. If market doesn't fade, trade to the next HSI target.

**before you enter let it center!*
